DETAILED ACTION

Election/Restrictions

Claims 10, 14 and 21-50 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected species, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 33.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 8-9, 11-13 and 15 are rejected under 35 U.S.C. 102(e) as being anticipated by Mitoguchi et al. [US 6,593,841].

Regarding claims 8 and 11, Mitoguchi et al. discloses a planar magnetic element comprising :

Art Unit: 2832

- at least one fine, continuous conductive patterns having a thickness of 10 μ m or more and a width to thickness ratio from 1 to less than 5 [column 31, lines 34-37]; and

- a plurality of magnetic insulative layers and at least one conductive pattern formed therebetween.

Regarding claims 9, 12-13 and 15, Mitoguchi et al. discloses a planar transformer comprising :

- a plurality of fine, continuous conductive patterns having a thickness of 10 μ m or more and a width to thickness ratio from 1 to less than 5 [column 32, lines 14-21]; and

- a plurality of magnetic insulative layers and at least one conductive pattern formed therebetween.

The specific method use to form the conductive patterns and method use to connect the conductive pattern are necessitate by the claimed product.

Response to Arguments

Applicant's arguments with respect to claims 8, 9 11-13 and 15 have been considered but are moot in view of the new ground(s) of rejection.
